

DAVID SHADLE

Idea to Evidence · New interaction concepts, prototyped and tested with your customers

david@davidshadle.com · 425.417.2339 · davidshadle.com/idea-to-evidence

THE SHORT VERSION

Idea to Evidence takes one idea for how your product could work and carries it to a working prototype that your customers (or agents) can interact with. You leave with evidence and a decision, not a recommendation.

AI can now do part of the work your customers do by hand. It can act on their behalf, anticipate a need, and complete a task. Forms, reports, help, and transactions can all work differently. That opens new ways for your product to serve customers, and gives them a reason to renew and buy more.

Most leadership teams already have ideas about where to start. What is hard to find is the time to learn which idea is worth building before committing to build it. This engagement is built to find that out, in a few focused sessions, with the building and testing done outside your leadership team's calendar.

WHAT YOU GET

A decision on evidence. Your customers use a working prototype before you commit to building it.

New thinking on how your product works. That includes where AI and agents can do part of the work while your customer stays in control.

A build-ready handoff. Working code, the full rulebook behind it, and an engineering scope your team can build from without starting over.

A clear line to value. The metric is named before any paid work begins, a baseline is taken, and results are reported at 90 and 180 days.

Your team, able to run the next cycle on its own. There is no retainer.

FIVE COMMITMENTS

The initiative aligns to or extends your own roadmap.

Every engagement is tied to a Value Creation Plan metric, named in the first conversation.

The work ends in something built, used by your customers before any decision is made.

You own every output of each phase you complete.

Every engagement is time-bound and ends with your team able to run the next cycle.

WHO IT IS FOR

Leadership of a Banyan operating company, usually the CEO or the person who holds product direction, working with the Operating Partner who owns the Value Creation Plan. OpCos arrive by referral from an Operating Partner or Banyan leadership, or after a Guild Session on an interaction pattern. Both routes begin with a free Discovery conversation.

HOW THE ENGAGEMENT WORKS

Six phases. Each paid phase has its own scope, fixed window, and fee, agreed before it begins. You commit one phase at a time and can stop after any of them, keeping everything it produced.

PHASE	WHAT HAPPENS	YOU RECEIVE
1. Discovery (free)	One conversation to confirm fit, name the metric, and agree where to start.	An engagement brief.
2. Audit	An evidence-based look at your product as customers experience it, from key flows, support tickets, and stakeholder conversations.	A tactical report, the named opportunity, and a baseline.
3. Assessment	Working sessions with your leadership team to choose one initiative worth testing.	A problem statement, the chosen initiative and test criteria, a specification, and the rulebook.
4. Prototype and customer testing	The initiative is built and tested with three to five of your customers. You decide to adopt, change, or stop.	A test report, a prototype demonstration, and a recorded decision.
5. Handoff	Your engineers receive the working prototype, the full rulebook in plain language, and an engineering scope.	The repository, the rulebook in plain language, an engineering scope, and a Value Review plan.
6. Value Review	Short reviews at 90 and 180 days, compared to the baseline taken in the Audit.	Two review reports, shared with your Operating Partner.

WAYS TO ENGAGE

LEVEL	INCLUDES	YOU TAKE AWAY
Understand	Discovery and Audit	An outside, evidence-based view of your product and the opportunity worth pursuing.
Define	Understand, plus Assessment	One initiative, agreed and specified, ready to test or build.
Prove	The full engagement	A tested prototype, a decision, a build-ready handoff, and the Value Review.

Discovery is free. Each paid phase is a fixed fee, agreed before it begins. The Value Review is included in every engagement that reaches Handoff. Fees on request.

WHAT WE ASK OF YOU

A named owner. Someone who holds the engagement and, after Handoff, the Value Review numbers.

Leadership time. For Discovery, the Assessment sessions, and the decision session.

Access and help. The product, the data, and the people who know it best, plus help recruiting three to five customers for testing and engineering time at Handoff.

YOUR DATA

Your data is used only for your engagement. Testing participants give consent and are not named. Everything produced, including testing records, transfers to you, and the provider keeps no copy. Nothing is shared with another company.

ABOUT DAVID SHADLE

Twenty years leading product, design, and engineering teams. I work where experience design and product strategy meet, and I build what I design. AI tools do the volume work of research, drafting, and building. My judgment decides what matters.
